Joe Ellsworth

Joe Ellsworth is a very well known businessman software technologist with a long history of achievements.

Most recently, Joe has been a key E-Speak solutions architect as a high level manager of the Solutions Team at HPs E-Speak Operation.

Joe hasn't allowed his management role to take him very far from technology. He helped code the hardest 30% of the first generation E-Speak Broker / Market Maker product which was delivered to Helsinki Telephone Corporation in Finland.

As part of his job, Joe was sent out as the factory expert to salvage deals and architect solutions for many customers after the lead architects for large SI consulting firms ran into problems and needed even more advanced architects. Joe is dedicated to Python and the Open Source community (like the rest of the team at PyBiz).

Before he worked for the E-Speak Operation, he worked in IT as a member of HP's CSO organization where he led the development and deployment of HPs Enterprise Portal technology called Enterprise Solutions Now (ESN).

Joe also led the development efforts for the Quote & Order Assistant (QOA) and Watson on the Web (WOW) while working in CSO. Joe led the effort to bring E-Commerce technologies into HP's Unix computer group.

Future Seminars
